2021 Annual Drinking Water Quality Report Reform Water Association PWS#:100007 May 2022

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We water you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies. Our water source is from wells drawing from the Lower Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Reform Water Association have received moderate rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Coyt Hunt at 662.285.7072. We want our valued customers to be informed about their water utility. If you want to learn more, please join us at any of our regularly scheduled meetings. They are held on the first Monday of the month at 7:00 PM at the Sherwood Community Center.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2021. In cases where monitoring wasn't required in 2021, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) — The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Cantagain	1			TEST RESU	ILTS			
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL/MRDL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination

10. Barium	N	2020*		.0186	No Range		ppm		2	-	2 Discharge of drilling westers
13. Chromium	N	2020*		1.5					_		Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
14. Copper	N	2017/		.1	No Range		ppb		100	10	OD Discharge from steel and pulp mills; erosion of natural deposits
17. Lead	N				0		ppm		1.3	AL=1	.3 Corrosion of household plumbin systems; erosion of natural deposits; leaching from wood preservatives

Disinfectio	n By-	Produc	ts								
32, TTHM Total rihalomethanes]	N	2021	4.24		No Range	ppb		0		80	By-product of drinking water chlorination.
Chlorine	N	2021	.6		.57	mg/i		0	MRD	- '	Water additive used to control microbes

^{*} Most recent sample. No sample required for 2021.

Our system received a CCR Report violation for not submitting this report in 2021 by the July 1st deadline.

We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Reform Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

~PROOF OF PUBLICATION~ STATE OF MISSISSIPPI COUNTY OF CHOCTAW

PERSONALLY appeared before me the undersigned authority in and for said County and State, Joseph McCain of The Choctaw Plaindealer, a newspaper printed and published in said County, who being duly sworn, deposes and says that the publication of this notice hereto affixed has been made in said newspaper for 1-consecutive week(s), to-wit:

Vol. 135, No. <u>23</u> on the <u>08</u> day of <u>JUNE</u>, 2022

(newspaper)

Sworn to and subscribed to this the 10th day of June, 2022, by the undersigned Notary Public of said County and State.

2021 Annual Drinking Water Quality Report Reform Water Association PWS# 100007 May 2022

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drawing water. We want you to understand the eithers we make to continually improve the water treatment process and plotted our water researches. We are committed to providing you with unformation because informed customers are our best allies. Our water source is from wells drawing from the Lower Velcox Aquiler.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its denking water supply to identify potential sources of contamination. A report containing detailed information on flow the susceptibility determinations were made has been furnished to our public water system and is available for events upon register. The wells for the Reform Water Association have received moderate rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water offile, please context Coyt Hunt at 562 266 7072. We want our valued costomers to be informed about their water offile. If you want to learn more, please print as at any of our requiring scheduled, meetings. They are held on the first Monday of the mooth at 7 00 PM at the Sharwood Community Center.

We outlinely maintor for contaminants in your directing water according to Federal and State lows. This table below lists all or the drinking water contaminants that were detected during the period of January 1° to Devember 31° 2021. In cases where monitoring wasn't required in 2021, the darks where the period of January 1° to Devember 31° 2021, the darks where monitoring wasn't required in 2021, the darks where the list is not received the scale of the salidar of the salidar of the first or undertrooped in describe restricted and can pink up settlements or contaminants from the presence of sentence or from human a fact, in containing contaminants and according to the period of sentence of the salidar that the salidar contaminants and the salidar and means, that may come from a salidar according or exact from what etiminates confirmed to detecting excellents, such as salid and means, which can be required as detailed uses, organic character and means which have come from a salidar according to solicine and committee, which can be recorded policine and contaminants including synthetic and volume organic characters and the means and can also come from gar districts and synthetic according to the result of oil and give production and menting automosts in ordain to according to the salidary water as salid to oil and give production and menting automosts in ordain to according to the production and contaminants in a salid contains of contaminants. We improve a mention of contaminants in the production and production and mention of least small according to the organic contaminants. We improve that the water posses a baselib rate.

In this table you will find many terms and abbreviations you might not be limited with. To help you destre understand these terms we've provided the following definitions:

Action Level - the concentration of a conteminant which if exceeded, triggers realthant or other requirements which a water system

Machine Continued (MCL) - The "Maximum Allowed" (MCL) is the Pichest level of a contiguous that is allowed in disnaying the best available treatment factors have set as close to the MCL Ga as feasible using the best available treatment factors have

* Mass recent sample. No sample required for 2021.

Our system received a CCR Report violation for not submitting this report in 2021 by the July TF deadline.

We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your mater IS SAFE at these levels

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all membering requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and compunents associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your rap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are converned about lead in your water, you may wish to have your rester-tested. Information on lead in drinking water, testing meltious, and steps you can take to minimize exposure is available from the Sate Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississeppi State Department of Fleath Public Realth Laboratory offers lead testing. Please contact 801.576/7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microtes, inoxpanis or organic chamicals and radioactive substances. All drinking water, including bothed water may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not may reasonably be expected to comain at reast small and the source of contaminants and solential health effects can be obtained by calling the Environmental Protection Agency's Sale Drinking Water Holline at 1.830.425.4751.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons gome people may be more voluerable to contaminate in chinning water than the general population. Immuno-congromises persons such as persons with cancer undergoing chamotherapy, persons who have undergoing organ transplants, people with HW/AIDS or other immune system disorders, some elderty, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health cans providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptospondium and other microbial contaminants are available from the Safe Drinking Water Hoffine 1 800 425 4791.

The Reform Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
